PRESS RELEASE

Springfield Mall Parking Deck - Springfield, PA

OWNER: PR Springfield/Delco Limited Partnership
ENGINEER: O'Donnell & Naccarato

PROJECT DESCRIPTION:

The Mall's elevated deck gets a good amount of movement throughout the temperature changes which can wreak havoc on expansion joints.

The Engineer's direction was to repair damaged concrete, the aged sealant, and expansion joint and replace it all with quality products to breathe new life into the deck.

Galvanized steel angle was used to create the new block out area, new compressed foam expansion joint was installed and all areas were protected with sealant. High performance traffic coating and a medium size aggregate made for an outstanding slip resistant surface. All areas then received high contrast striping, and the project was opened back up for business on budget, and on time.

QUINN CONSTRUCTION, INC.®

Scope of Work:

- ◆ Surface Prep by Mechanical Blast
- ◆ Shallow and Full Depth Concrete Demo
- ◆ Shallow & Full Depth Concrete Repairs
- ◆ Steel Reinforcing Replacement
- ◆ Prep & Coat Structural Beams
- ◆ Crack, Cove & Joint Sealant Replacement
